

Lucas Vinicius dos Santos da Silva

Software Engineer

Site: E-mail: GitHub: LinkedIn: Location: São Paulo, Brazil

Technical Skills

Programming Languages: C++ (6 years), JavaScript (React, Node) (4 years), Pascal (9 years)

Build Managers: CMAKE, npm **Version Control:** Git, Subversion

Software: Visual Studio, Google Docs, IntelliJ/Android Studio, Unity, Slack, Trello, Eclipse, JIRA, Unix/Linux

Databases: SQLite, MySQL, MongoDB, Firebird, JSON

Education

2012 – 2013 | ETEC Centro Paula Souza – Technical Degree in Information Technology 2014

– 2018 | UniSALESIANO Araçatuba – SP – Bachelor's Degree in Computer Engineering 2021

– 2022 | PUC Minas – Postgraduate Degree in Cybersecurity and Data Governance 2018 |

Linux Server Management Course – InterSOLID

Languages

- Portuguese (first language)

- English (second language)

- Spanish (basic)

Experiences

2022 – Present | **FX Sistemas – Full Stack Development** (Node.js, React, and MySQL)

2022 – Present | **FX Sistemas – Linux Server Management for services** (SSH, Bash, NGINX, Docker, and PM2)

2019 – Present | **Freelance Game Developer – C++ Development** (CMake, Boost, ENet, and SFML)

2022 – 2023 | **FX Sistemas – Backend Development** (Python, Django, and RabbitMQ)

2018 | **Freelance – Python Development** (Raspberry Pi, OpenCV, Selenium, and Tesseract OCR)

2013 – 2021 | **FX Sistemas – Desktop Development** (Delphi, Firebird SQL)

Relevant Professional Experiences

Backend API Development & Message Automation (2023)

- Developed a complete API for sending and receiving bulk messages, enabling integration with external systems and message scheduling for customer contact lists. Built in Python using Django REST Framework, deployed on Ubuntu with RabbitMQ and Gunicorn to ensure background processing and service persistence.

Server Automation and Maintenance (2023 – 2024)

- Designed and developed automated scripts and routines for backup and update processes on Ubuntu web servers, using SSH, Bash commands, and scheduling via crontab.

Webhook Integration for CI/CD (2022)

- Integrated webhooks to detect pushes to the main Git branch and provide notifications regarding process completion or potential deployment issues.

Game Development & Engine Tools (2019 – Present)

- Independently developed 2D games using C++ and the SFML library, including officially released titles, one of which was published on Steam as an experimental project. Also designed and developed a custom map editor using the same map-reading system as the game engine, supporting terrain, rules, and game elements with shared resources.

Other Interests

RTS, Dungeons & Dragons, winter, pokémon, animals, and laptops.
